

The PRO-6000B is an up grade from the PRO-6000. Whilst keeping the same A/V functions of the 6000 unit the 6000B now incorporates IR switching.

The previous version has a common IR pass through and can be up graded for IR switching by adding the PRO-6070. Whilst an ideal solution for existing clients, it makes much more sense to add the IR switching into the unit for new installations.

It is very common now to have multiple SKY or free to air boxes with similar IR codes, making IR switching a necessity.

The System allows users full interactive control of connected source devices including satellite and terrestrial television, radio, HI-FI and CCTV equipment from any point in the premises using proprietary infrared controls.

Inputs are all RCA (Phono) and the outputs are RJ45, making the system very simple to install. These connections are familiar to both AV installers and most the SOHO users.

The unique design provides for an entry level, low cost audio-visual distribution system where equipment may be positioned in a central location. AV signals and IR control are delivered over a common cable infrastructure that also supports computer networks and telephony services.

Wherever there is a CAT5e outlet installed services can be delivered with minimal disruption. Thousands of satisfied customers enjoy the quality of our audio-visual delivery, which makes this a market leader.

PRO-6004 Phono Receiver

PRO-6001 Scart Receiver

PRO-0201 IR Handset

PRO-6002 Scart Transmitter

FEATURES:

- Compact design
- Up to 13 AV inputs
- Full Infrared pass through
- 8 IR Switch ports
- 2 remote/Aux device inputs
- Up to 6 viewing zones
- RS232 control interface
- Forced viewing
- Channel barring

12Vdc IEC 3 Pin Plug
Fuse 1amp A/S
Frequency 50/60KHz
